What is Abortion ?

☑+966505195917☑

An abortion is medically referred to as a therapeutic abortion when it is performed to save the life of the pregnant woman; to prevent harm to the woman's physical or mental health; to terminate a pregnancy where indications are that the child will have a significantly increased chance of mortality or morbidity; or to ...An induced abortion is different from a spontaneous abortion. That is the loss of a pregnancy before the 20th week of pregnancy. It is more commonly known as a miscarriage.

Kind of abortion :

☐+966505195917☐

There are 2 types of abortion:

1. Medical, which uses (cytotec) medication.
2. Surgical, which involves a small operation.

How mifepristone work?

+966505195917

Mifepristone is a medication used in medical abortion (abortion pill) procedures. It works by blocking the hormone progesterone, which is necessary to maintain the lining of the uterus where a fertilized egg would normally implant and develop. Without progesterone, the lining breaks down, making it difficult for the pregnancy to continue. Mifepristone is often used in combination with another medication called misoprostol to induce contractions and complete the abortion process.

How misoprostal (cytotec)work?

+966505195917

Misoprostol is a medication that is used in combination with mifepristone for medical abortions. It works primarily by causing contractions of the uterus, which helps expel the contents of the uterus, including the embryo or fetus.

+966505195917

Here's how misoprostol (cytotec)works in the context of abortion:

+966505195917☐

Softening of the cervix: Misoprostol helps soften the cervix (the lower part of the uterus), which makes it easier for the uterus to expel its contents.

+966505195917☐

Uterine contractions: It stimulates strong uterine contractions, similar to those that occur during labor, to expel the pregnancy tissue.

☐+966505195917☐☐

Completing the abortion process: When used after mifepristone, misoprostol ensures the expulsion of the remaining contents of the uterus, completing the abortion process.

☐+966505195917☐

Medical abortions using mifepristone and misoprostol are generally safe and effective when used according to medical guidelines and under medical supervision.

☐+966505195917☐☐

Medical abortion(cytotec) guideline :

☐☐+966505195917☐

For medical abortion at < 12 weeks:

1.Recommend the use of 200 mg mifepristone administered orally, followed 1-2 days later by 800 µg misoprostol administered vaginally, sublingually or buccally. ...

2.When using misoprostol alone: Recommend the use of 800 µg misoprostol administered buccally, sublingually or vaginally.

Surgical Abortion guideline:

☐☐+966505195917

Surgical abortion, also known as suction aspiration abortion, can be performed in a one-day procedure if less than 14 weeks have passed since the first day of your last menstrual period. The procedure is done in the doctor's office with local anesthesia and oral pain-relieving medications.

☐+966505195917☐☐

The reasons for having an (cytotec)abortion are:

☐+966505195917☐

1. Don't want to have children because you are worried it will disrupt your career.
2. Don't want to have children without a father.
3. Pregnant due to infidelity.
4. Pregnant out of wedlock.
5. The child's condition is still small.
6. Pregnancy conditions that are dangerous for the mother.
7. Abortion performed against a defective fetus.
8. Abortion done for other reasons.

☐+966505195917☐☐

Side Effects of the Abortion (cytotec)Drug Cytotec Misoprostol

☐+966505195917☐☐

Nausea or stomach cramps may occur. If any of these effects persist or worsen, notify us immediately.

Remember that your doctor has prescribed this medication because he or she has judged that the benefit to you is greater than the risk of side effects. Many people using this drug do not have serious side effects.

Diarrhea is common with the drug misoprostol and usually occurs about two weeks after you start taking it, and lasts for about a week. Make sure to maintain fluid and mineral/electrolyte intake to prevent dehydration. Persistent diarrhea can sometimes cause major losses of body fluids and minerals. Tell your doctor immediately if you experience any of these serious signs of dehydration and mineral imbalance, severe dizziness.

☐☐+966505195917☐

ADVANTAGES OF CYTOTEC (medical) TERMINATION DRUG:

☐+966505195917☐☐

1. Abort the pregnancy quickly and completely.
2. The results after taking cytotec and gastrul drugs are like a natural miscarriage.
3. It doesn't cost much.
4. Can be used in early pregnancy.
5. No need for surgical intervention.
6. Success rate reaches 99%.

☐+966505195917☐

Abortion is carried out by pregnant women, both married and unmarried, for various reasons, but the main reasons are non-medical reasons (including self-abortion/intentional/artificial)

☐+966505195917☐

Usage of (cytotec)abortion pills:

(As prescribed by the physician)

☐☐+966505195917☐☐

Appeal: For those of you who really want to abort a pregnancy, now there are lots of patients who come and complain about the circulation of fake abortion drugs being sold. We advise you not to be tempted by cheap abortion drug prices.
